

2210 — Enterprise Architecture (EA)

Involves leveraging existing methodologies to frame problems and to better enable senior-level decision making which includes development of strategic plans and analyzing alternatives for problem resolution. By applying systematic rational methods to eliminate gaps, the Army will be able to more effectively and efficiently pursue its mission. The Enterprise Architect is the facilitator in shaping the decision between the Information Technology designers, Operational/Business process builders, and the customer/stakeholder. To be successful, the architect is knowledgeable about the operational/business processes, Information Technology capabilities, is an active listener, and has excellent negotiating skills. Enterprise Architects are selected for their expertise, people skills and understanding of business processes to overcome the challenges and develop architectures.
